United Concrete Form Release

Product Data Sheet

Product Description:

United Concrete Form is a release general purpose, chemically and physically active concrete form release agent with a light viscosity, light colored form release oil and can be brushed, sprayed, or rolled onto the form leaving an oily film. **United Concrete Form Release** is a great choice for architectural and complex concrete form work where finish is important. **United Concrete Form Release** employs a unique chemistry that leaves very few bug-holes on the cement casting and little residual build up on the form. **United Concrete Form Release** leaves a soft oily film on steel or wood forms and has an additional rust inhibitor for lasting protection of steel forms.

It is ideal for sensitive environmental situations around rivers, streams, or potable water reservoirs. It is VOC compliant, biodegradable, and ready to use. It also cleans and reconditions forms, and helps eliminate buildup, bug-holes, and fines.

Outstanding Qualities:

1. Reduces form cleaning and maintenance costs, forms become self-cleaning with continued use.
2. Ready to use.
3. Protects metal and wood forms from weather damage prior to pour.
4. Meets all federal, state and Canadian VOC requirements.

Typical Specifications

Flash Point °C/°F	>150/302
Viscosity, 40° C, cSts	5.258
Avg. lbs/Gal @ 23° C	7.3

Supplying Quality Industrial Lubricants to the Metals Industry since 1906
